영어 · 독해 · 대의 파악: 주제·요지·제목 · 킬러 · SKY 멘토 × AI 협업 출제

[킬러] 1 Read the passage and choose the best topic.

The persistent appeal of the "lone genius" narrative in the history of science conceals a subtler epistemic function than mere hero-worship. When a discovery is retrospectively attributed to a single mind, the messy lattice of failed experiments, contested priorities, and incremental borrowings that actually produced it is collapsed into a clean causal line. This compression is not simply a distortion; it is what allows a discovery to be *taught*. A textbook cannot reproduce the archive; it must offer a nameable origin against which subsequent knowledge can be indexed. Thus the genius myth functions less as a historical claim than as a pedagogical compression algorithm—one that trades fidelity for transmissibility. The danger arises only when this compression is read back as ontology: when the convenient fiction of a starting point is mistaken for the actual topology of how knowledge accretes.

1. the historical accuracy of attributing discoveries to individuals
2. the role of textbooks in preserving scientific archives
3. the genius myth as a transmissibility-driven simplification with a latent risk
4. why collaboration outperforms individual effort in modern science
5. the psychological origins of hero-worship in scientific communities

[킬러] 2 Choose the best word for the blank.

Economists have long assumed that adding options to a choice set can never make a rational agent worse off, since any newly available option can simply be ignored. Yet field experiments repeatedly show welfare declining as menus expand. The resolution is not that people are irrational but that the classical account quietly presumes choosing to be *costless*. Once the cognitive labor of comparison is priced in, an option is never merely an option; it is an obligation to evaluate. Each addition thus imposes a tax that the discarded alternatives never repay. What looks like a paradox of overabundance is, on closer inspection, a straightforward accounting error: the model counted the benefits of freedom while treating its _____ as zero.

1. rewards
2. overhead
3. scarcity
4. fairness
5. novelty

[킬러] 3 Choose the best title.

We tend to imagine forgetting as a failure of an otherwise faithful recording device. But a system that retained everything would be paralyzed: recall would require sifting an ever-growing haystack in which every needle is equally sharp. Memory earns its usefulness precisely by being lossy. What we call forgetting is often not deletion but demotion—the strategic lowering of a trace's retrievability so that the relevant rises and the incidental sinks. On this view, the aging of a memory is not decay but curation, and the occasional failure to recall a trivial fact is evidence that the archivist is doing its job, not neglecting it.

1. The Fragility of Human Memory Under Stress
2. Forgetting as Curation, Not Malfunction
3. How to Improve Retrieval Through Repetition
4. The Impossibility of a Perfect Recording Device
5. Why Trivial Facts Fade Faster Than Important Ones

[킬러] 4 Choose the best order after the given sentence.

Given: A map that reproduced its territory at a one-to-one scale would be useless, and this uselessness is instructive.

(A) The same logic governs every model, theory, and metaphor we use to think: their power is inseparable from what they refuse to represent. A framework that flagged every exception would forfeit the very generality that made it worth adopting.

(B) Its uselessness stems not from inaccuracy but from a surplus of accuracy—it would occupy the whole territory, offering no vantage from which the territory could be surveyed. The value of a map lies in the ratio between what it shows and what it omits.

(C) Recognizing this, we should resist the intuitive equation of "more detailed" with "more true." To demand that a model include everything is to demand that it stop being a model, and thereby stop being useful for the very reasoning it was built to support.

1. (A)-(C)-(B)
2. (B)-(A)-(C)
3. (B)-(C)-(A)
4. (C)-(A)-(B)
5. (C)-(B)-(A)

[킬러] 5 Choose the place for the sentence.

Sentence: But this very robustness is what makes the practice self-immunizing against evidence. Astrological prediction survives not despite its vagueness but because of it. (①) A forecast that "a relationship will be tested" is confirmed by conflict and, equally, by the suspicious absence of conflict, since even harmony can be read as the calm before a test. (②) The prediction cannot fail because no describable outcome lies outside its scope. (③) A believer encountering a disconfirming event simply reclassifies it as a delayed or disguised confirmation, and the reclassification costs nothing. (④) A claim that can absorb any outcome tells us nothing about which outcome to expect, and a claim that forbids nothing predicts nothing. (⑤)

[킬러] 6 Choose the grammatically INCORRECT one.

The conviction that technology is neutral—a mere tool ①**whose** moral valence depends entirely on its user—is comforting precisely because it ②**absolves** designers of responsibility. Yet every artifact embodies assumptions about who will use it and how, and these assumptions, once materialized, quietly redistribute what ③**are** possible for different people to do. A staircase does not forbid the wheelchair user; it simply makes no provision for one, and the difference between prohibition and non-provision, though it feels morally significant, ④**matters** little to the person left at the bottom. What we build, in shaping the space of the feasible, is already making choices ⑤**that** we prefer to attribute to those who come later.

[킬러] 7 Choose the best point (요지) of the passage.

Public debate treats transparency as an unqualified good: sunlight, we are told, is the best disinfectant. But transparency imposed on a process not designed for it does not reveal that process—it deforms it. When deliberation is made fully visible, participants stop deliberating and start performing, tailoring their stated reasons to an imagined audience rather than to the problem. The visible record then documents not how the decision was actually reached but how the participants wished to be seen reaching it. Sunlight, in such cases, does not disinfect; it prompts the bacteria to arrange themselves into a pleasing pattern. Genuine accountability may therefore require protecting certain deliberations from view so that they can remain deliberations at all.

1. Transparency should be maximized in every public institution.
2. Observation can corrupt the very process it aims to hold accountable.
3. Deliberators are inherently dishonest when unobserved.
4. Disinfection metaphors are misleading in political discourse.
5. Accountability and efficiency are always in tension.

[킬러] 8 Choose the best word for the blank.

The romantic ideal of the artist who creates "outside all tradition" rests on a confusion between constraint and prison. A poet who abandoned every inherited form—meter, genre, even the differential meanings a shared language supplies—would not achieve maximal freedom but maximal silence, for there would be no code against which any gesture could register as meaningful. Originality is not the escape from convention but a calculated deviation *legible only against* the convention it strains. The truly unprecedented, having no backdrop to be measured against, would be indistinguishable from noise. Innovation, in short, is parasitic on the very regularities it disturbs, and the artist's freedom is therefore not the absence of rules but the _____ of them.

1. abolition
2. concealment
3. expressive exploitation
4. faithful reproduction
5. arbitrary multiplication
