문제편

[1] 기본 | 다음 글의 주제로 가장 적절한 것은?

Many people think of urban trees as decorations that make streets look pleasant. Yet their most important contribution may be less visible. On hot days, buildings and roads absorb sunlight and release heat long after sunset, creating what is known as the urban heat island effect. Trees interrupt this process in two ways. Their leaves block part of the sunlight before it reaches hard surfaces, and they release water vapor through a process similar to sweating. As a result, neighborhoods with enough tree cover often remain cooler and require less energy for air conditioning. For city planners, trees are not simply ornaments; they are living infrastructure that helps cities adapt to a warmer climate.

1. the artistic value of planting trees along city streets
2. the role of urban trees in reducing heat and energy use
3. the economic burden of maintaining trees in modern cities
4. the historical development of public parks in urban areas
5. the need to replace old buildings with eco-friendly designs

[2] 기본 | 다음 글의 밑줄 친 부분이 의미하는 바로 가장 적절한 것은?

When students review material, they often prefer rereading because it feels smooth and familiar. However, this feeling can be misleading. A paragraph may seem easy to understand simply because the eyes have passed over it several times. In contrast, trying to recall the content without looking at the page feels more difficult, but it strengthens

memory more effectively. The struggle involved in retrieval tells the brain which information needs to be rebuilt. In learning, therefore, comfort can be a poor guide.

1. Easy study methods may not lead to effective learning.
2. Physical relaxation is necessary before memorization.
3. Students should avoid difficult subjects whenever possible.
4. Repeated reading is the only reliable way to master knowledge.
5. Emotional stability matters more than study time.

[3] 심화 | 다음 글의 빈칸에 들어갈 말로 가장 적절한 것은?

Digital maps appear to give us perfect knowledge of place. A blue dot tells us where we are, and a line tells us where to go. But this convenience can weaken our ability to form mental maps. When people follow turn-by-turn instructions, they often pay attention only to the next command, not to the relationship among streets, landmarks, and directions. They arrive successfully, yet they may be unable to explain how the destination is connected to the rest of the city. In other words, navigation technology can change travel from an act of spatial understanding into an act of _____.

1. independent exploration
2. mechanical compliance
3. historical interpretation
4. emotional attachment
5. creative reconstruction

[4] 심화 | 주어진 문장이 들어가기에 가장 적절한 곳은?

Given sentence: This is why the same delay can feel shorter when a person is given meaningful information about it.

Waiting is not measured only by clocks. (①) People's experience of waiting depends strongly on whether they feel ignored or informed. (②) At a train station, a five-minute delay without any explanation may produce irritation, while a ten-minute delay with a clear announcement may be accepted calmly. (③) Information gives people a sense that the situation is being managed, even if it does not change the actual length of the wait. (④) Designers of public services therefore pay attention not only to reducing delays but also to communicating them well. (⑤)

1. ①
2. ②
3. ③
4. ④
5. ⑤

[5] 킬러 | 다음 글 다음에 이어질 글의 순서로 가장 적절한 것은?

In science, a model is not a miniature copy of reality. It is a purposeful simplification that leaves out many details in order to make a certain pattern easier to see.

(A) Trouble begins when the success of a model in one setting is mistaken for proof that it captures the whole truth. A model of traffic flow, for instance, may predict average speed accurately while ignoring the stress experienced by drivers or pedestrians.

(B) This selective nature is not a weakness by itself. A weather map, for example, does not show every tree or building, but by excluding them it can display pressure systems and storm paths more clearly.

(C) Therefore, using models wisely requires asking not only whether they work, but also what they have deliberately made invisible. The omitted parts may be irrelevant to one question yet crucial to another.

1. (A) - (C) - (B)
2. (B) - (A) - (C)
3. (B) - (C) - (A)
4. (C) - (A) - (B)
5. (C) - (B) - (A)

[6] 킬러 | 다음 글의 내용을 한 문장으로 요약하고자 한다. 빈칸 (A), (B)에 들어갈 말로 가장 적절한 것은?

Some museums now invite visitors to touch replicas of artifacts, rearrange digital exhibits, or record their own interpretations. Critics sometimes argue that these practices distract from serious appreciation. Yet participation does not necessarily reduce respect for an object. When visitors manipulate a replica of an ancient tool, they may notice its weight, grip, and practical limitations more vividly than they would by only reading a label. When they compare their interpretation with others, they may also recognize that meaning is not simply delivered by the museum but constructed through guided attention. The important issue is not whether visitors are active or silent, but whether their activity is structured to deepen observation.

Summary: Participatory museum experiences can enhance appreciation when visitor activity is not mere entertainment but a means of (A) _____ and (B) _____ understanding.

1. controlling · standardizing
2. deepening · constructing
3. replacing · simplifying
4. accelerating · commercializing
5. memorizing · limiting
