When we cook a meal at home, we control every ingredient that goes into it. We can reduce salt, choose fresh vegetables, and avoid the hidden sugars found in many processed foods. Cooking also slows us down, encouraging us to sit and enjoy what we made rather than eating quickly on the go. In this way, the simple act of preparing our own food shapes not only what we eat but also how mindfully we eat it.

1. the difficulty of learning to cook
2. the health benefits of preparing food at home
3. the popularity of processed foods
4. the importance of eating quickly
5. the rising cost of fresh vegetables

Many students believe that making mistakes is a sign of failure. However, research on learning shows the opposite. When learners struggle with a problem and get it wrong, their brains form stronger memory connections during the correction process. In short, the errors we make and then fix are often what allow real understanding to take root.

1. 실수는 반드시 피해야 할 실패의 표시이다.
2. 암기는 이해보다 언제나 우선한다.
3. 실수를 바로잡는 과정이 진정한 학습을 이끈다.
4. 어려운 문제는 학습에 도움이 되지 않는다.
5. 학생은 교사의 설명에만 의존해야 한다.

A single bee cannot build a hive, and a single ant cannot support a colony. Yet together, thousands of these tiny creatures create structures and systems far more complex than any one of them could imagine. Their strength lies not in individual power but in cooperation. What looks like chaos from a distance is, in fact, a carefully coordinated effort.

1. Why Insects Fear Being Alone
2. The Hidden Power of Working Together
3. How to Build a Perfect Hive
4. The Danger of Large Colonies
5. Insects as the Strongest Animals

We often assume that having more options makes us happier. Yet when a supermarket offers dozens of nearly identical jams, many shoppers walk away buying nothing at all. Faced with too many choices, people feel anxious about making the wrong one, and the effort of comparing every option becomes exhausting. Paradoxically, a smaller, well-curated selection can leave customers more satisfied and more likely to decide. Abundance, it seems, is not always a gift.

1. strategies for designing attractive supermarkets
2. the negative effects of having too many choices
3. the reasons people prefer expensive products
4. how advertising influences buying decisions
5. the growth of the global food industry

Historians once wrote almost exclusively about kings, generals, and treaties. But such accounts leave out the vast majority of people who actually lived through those times—the farmers, workers, and families whose daily lives shaped history just as much as any battle. By studying ordinary letters, receipts, and diaries, modern historians recover voices that were long ignored. A fuller picture of the past emerges only when we look beyond the powerful few.

1. 역사는 위대한 지도자들의 업적을 중심으로 서술해야 한다.
2. 평범한 사람들의 삶을 살펴야 과거를 온전히 이해할 수 있다.
3. 전쟁의 기록이 역사 연구에서 가장 중요하다.
4. 과거의 문서는 신뢰하기 어려워 활용을 피해야 한다.
5. 역사가는 개인의 감정을 배제하고 사실만 기록해야 한다.

New technologies rarely arrive fully formed. When electric light first replaced gas lamps, people simply installed bulbs where flames had been, keeping the same fixtures and habits. Only decades later did architects realize that electric light could be placed anywhere—on ceilings, inside walls, along floors—freeing design in ways gas never allowed. The lesson recurs across history: we first use a new tool to do old things, and only gradually discover what it truly makes possible. The full value of an invention is revealed not at its birth but through the slow reimagining that follows.

1. The Instant Impact of Every New Invention
2. Why Gas Lamps Were Better Than Electric Light
3. Old Habits Die Fast in Modern Design
4. New Tools Reveal Their Worth Only Over Time
5. The Failure of Early Electric Technology

A river appears to be a fixed thing on a map, a single blue line with a name. In reality, it is never the same water twice; it is a process, constantly moving, eroding, and depositing. To call it a "thing" is a convenient fiction. Much of our language works this way—turning ongoing processes into solid-seeming nouns. "Health" is not an object we possess but an activity our body performs moment to moment. When we forget this, we treat living, changing realities as if they were frozen objects, and we misunderstand how they actually work.

1. 강은 지도 위에 정확히 표시할 수 있는 고정된 대상이다.
2. 언어는 대상을 있는 그대로 정확하게 반영한다.
3. 건강은 우리가 소유하는 하나의 물건이다.
4. 과정을 고정된 사물로 여기면 실재를 오해하게 된다.
5. 명사보다 동사를 많이 쓰는 언어가 더 우월하다.
