[기본] 1 번. 다음 글의 제목으로 가장 적절한 것은?

In many cities, summer heat is treated as a problem of weather, but it is also a problem of design. Wide roads, dark roofs, and crowded buildings hold heat long after sunset. Trees work differently. Their leaves give shade, and the water released from them cools the surrounding air. Yet planting trees is not simply a matter of putting green objects into empty spaces. If the trees are planted only in wealthy neighborhoods, the cooling effect becomes another form of advantage. A city that wants to reduce heat must ask where shade is most urgently needed: near bus stops, school routes, small apartments, and workplaces without air-conditioning. Urban trees are most valuable when they are planned as public infrastructure, not as decoration.

1. Why City Trees Should Be Chosen for Their Beauty
2. The Hidden Costs of Maintaining Urban Forests
3. Urban Trees as Equal Access to Cooler Streets
4. How Weather Forecasts Improve City Planning
5. The Economic Value of Expensive Green Areas

[기본] 2 번. 다음 글의 밑줄 친 낱말 중, 문맥상 쓰임이 적절하지 않은 것은?

Many students believe that good note-taking means writing down as much as possible.

However, effective notes are not a copy of the lesson. They are a record of thinking. When learners pause to decide what matters, they ① select information rather than merely collect it. This process helps them ② organize ideas into meaningful groups. It also allows them to notice gaps in understanding, which can later be ③ clarified through questions or review. In contrast, copying every sentence often ④ strengthens confusion because the student has no time to judge relationships among ideas. The best notes, therefore, are not the longest ones but the ones that ⑤ reflect active mental processing.

1. ①
2. ②
3. ③
4. ④
5. ⑤

[심화] 3 번. 다음 빈칸에 들어갈 말로 가장 적절한 것은?

Community mapping projects often invite local residents to report broken sidewalks, unsafe crossings, or areas that flood after heavy rain. Because residents experience these problems directly, their reports can reveal details that official surveys miss. However, such maps do not automatically represent the whole community. People with stable internet access, free time, and confidence in public institutions are more likely to participate. As a result, a map full of dots may look complete while silently ignoring those who are least able to submit data. For this reason, the success of a community map should not be measured only by how much information it gathers, but by _____.

1. how quickly the project replaces professional urban planners
2. whether it makes its own blind spots visible
3. how effectively it removes disagreement among residents
4. whether it limits reports to problems that can be solved cheaply

5. how closely it follows the design of commercial map services

[심화] 4 번. 글의 흐름으로 보아, 주어진 문장이 들어가기에 가장 적절한 곳은?

Given sentence: This delay changes the artwork from an object to be recognized into an experience to be constructed.

Visitors to art museums often move through galleries as if they were scrolling through images on a screen. **[A]** They glance, identify the subject, and move on before the work has had time to disturb their first impression. Slow looking asks for a different habit. **[B]** Instead of trying to name what a painting is about immediately, the viewer stays with uncertain details: a shadow that seems too heavy, a face turned slightly away, or a color repeated in an unexpected corner. **[C]** The meaning of the work then emerges through comparison, memory, and revision. **[D]** In this sense, slow looking is not passive admiration but active inquiry. **[E]** The viewer is not consuming a finished message; the viewer is helping produce one.

1. [A]
2. [B]
3. [C]
4. [D]
5. [E]

[킬러] 5 번. 주어진 글 다음에 이어질 글의 순서로 가장 적절한 것은?

Recommendation systems are often described as tools that simply help users find what they already like. Yet this description leaves out an important part of their influence.

(A) Over time, this repeated narrowing can make a person's taste appear more fixed than it really is. The system then treats the narrowed pattern as proof of preference, even though

the pattern may have been partly produced by the system itself.

(B) A recommendation is not just a response to past behavior; it is also a condition for future behavior. By placing certain songs, articles, or videos in front of a user, the system changes what the user has the opportunity to choose.

(C) Of course, users are not powerless. They may search deliberately, reject suggestions, or explore unfamiliar categories. Still, these actions require effort, whereas accepting the visible option is easy. Convenience gives the system a quiet advantage.

1. (A) - (C) - (B)
2. (B) - (A) - (C)
3. (B) - (C) - (A)
4. (C) - (B) - (A)
5. (C) - (A) - (B)

[킬러] 6 번. 다음 빈칸에 들어갈 말로 가장 적절한 것은?

A scientific model is sometimes criticized for being unrealistic. Such criticism is fair when the model hides assumptions that should be examined. But the mere fact that a model simplifies reality is not a weakness. A map that included every stone, fence, and fallen leaf would be useless for finding a route. Its value comes from leaving out nearly everything except the relations needed for a particular purpose. Scientific models work in a similar way. By reducing a complex system to selected variables, they allow researchers to see patterns that would otherwise remain buried in detail. The danger begins not when a model is simple, but when users forget _____.

1. that accuracy is always less important than speed
2. that every model is designed to ignore something
3. that natural phenomena can be explained without evidence

4. that complex details should never influence scientific reasoning

5. that a useful model must include all observable features
